This consent form is designed to verify that you have been satisfactorily informed and educated in respect to your skin care treatment, as well as its aftercare, so that you may make an educated decision as to whether to have this procedure performed. Please read and initial each paragraph below, and freely ask us any questions you may have.

GENERAL INFORMATION:

_____ Prior to receiving this treatment, I have been candid in revealing any condition that may have a bearing on this procedure, such as marked pre-treatment asymmetry; pregnancy or breastfeeding; infection at the proposed injection sites; allergy to human albumin; or a history of neurologic disease, e.g., myasthenia gravis, ALS, or Lambert-Eaton syndrome.

_____ I understand that Botox® Cosmetic is approved by the FDA to treat frown (glabellar) lines and crow's feet and that treatment of wrinkles in other areas is considered "off-label".

_____ I understand that to reduce wrinkles, tiny amounts of Botox® Cosmetic are injected into the facial muscles which are responsible for the wrinkles.

_____ I understand that the muscle weakening effect gradually takes place over 3-14 days and that the effect is temporary, with the average response being 3 to 4 months. Individual responses may be longer or shorter.

_____ I understand that there are alternatives to Botox® Cosmetic therapy for wrinkles, including no treatment, use of topical creams, use of dermal fillers, chemical peels, laser treatment, and surgical face or brow lift.

_____ I understand that despite proper planning, patients do not always respond as desired to Botox® Cosmetic therapy. m.pulse charges Botox® Cosmetic therapy on a per unit basis. Additional fees apply for future "touch-up" therapies if additional units are necessary.

RISKS/SIDE EFFECTS:

_____ I understand that this procedure may have side effects, including but not limited to: eyelid droop, brow droop or depression, facial droop, asymmetry, swelling, bleeding, bruising, dry eye, excess tearing, corneal exposure, corneal ulceration, persistent corneal epithelial defect, double vision, scarring, infection, headache, prolonged redness or healing, and a theoretical risk of viral transmission.
